

Rahaf Alweldi

Computer Science Student

A computer science student familiar with wide range of programming utilities and languages. Seeking to enroll in a training program to improve my software development knowledge and remain up to date on the latest developing trends within the industry.

Projects

• CO-OP Finder:

It is a website that gathers most of the companies and universities with training opportunities for students. In this way, students can easily apply for a training without having to search through other websites and sources. It is also a resource that helps companies announce their available training opportunities for students.

Skills Gained from The Project:

- ✓ Experienced with front-end development
- ✓ Developed the website using Bootstrap framework for responsive layout.
- ✓ Managed to work on the back-end side using PHP and SQL

• Email Spam Classifier:

It is an agent that have the capability to classify the incoming emails as spam or non-spam based on some factors. This project was implemented using Python.

Skills Gained from The Project:

- ✓ Good experience working with Python.
- ✓ Familiar with working on Pandas and NumPy libraries.

Volunteer Experience

Active member

Computer Club / Yanbu Industrial College

Computer club aims to provide the students activities where they gain knowledge and develop new skills related to the field of computer.

- My volunteer activity was to give a workshop on Microsoft Word, which is important to know as a college student to make professional documents.
- The club announced a competition named PyHack which is a problem-solving competition using Python. I volunteer to help in the arrangement and help the participants with their code errors.
